BRAND POWER

Brand leadership

Top 500 Chinese enterprises and top 500 global machinery enterprises. In 2025, evaluated by the World Brand Lab, the brand value of "People" is 101.636 billion yuan, and it has become one of the 500 most valuable brands in China.

Quality leadership

Products have won the highest award in the field of quality in China "National Quality Award" and China Quality Award nomination award, through CCC certification or "S", "CE", "CB" and other international certification, was named "China famous brand products" and "national customer satisfaction products", selling well in more than 125 countries and regions around the world.

Technology leadership

More than 100 national key new products, more than 3,000 domestic and foreign patents, more than 5,000 science and technology certificates, the company has reached strategic partnerships with more than 30 institutions of higher learning and technology research and development institutions around the world.

100+

National key new products

3000+

Domestic and foreign patents

5000+

Science and technology certification

Service leadership

5.0 Intelligent service with customers to establish a comprehensive service network, service hotline: 400-898-1166, we provide from the product unbox inspection, warranty period to provide three guarantees, warranty period to provide lifelong maintenance, on-site equipment installation arrangements to provide technical guidance and other leading services.

5.0 Smart Service

Five major service commitments:
professional, rapid, reliable, sincere, and satisfactory

The Ecological Cirele Of The Intelligent Industry

PEOPLE
ELECTRIC

People-driven Innovation, Beyond the Future

Perfect Smart Grid System

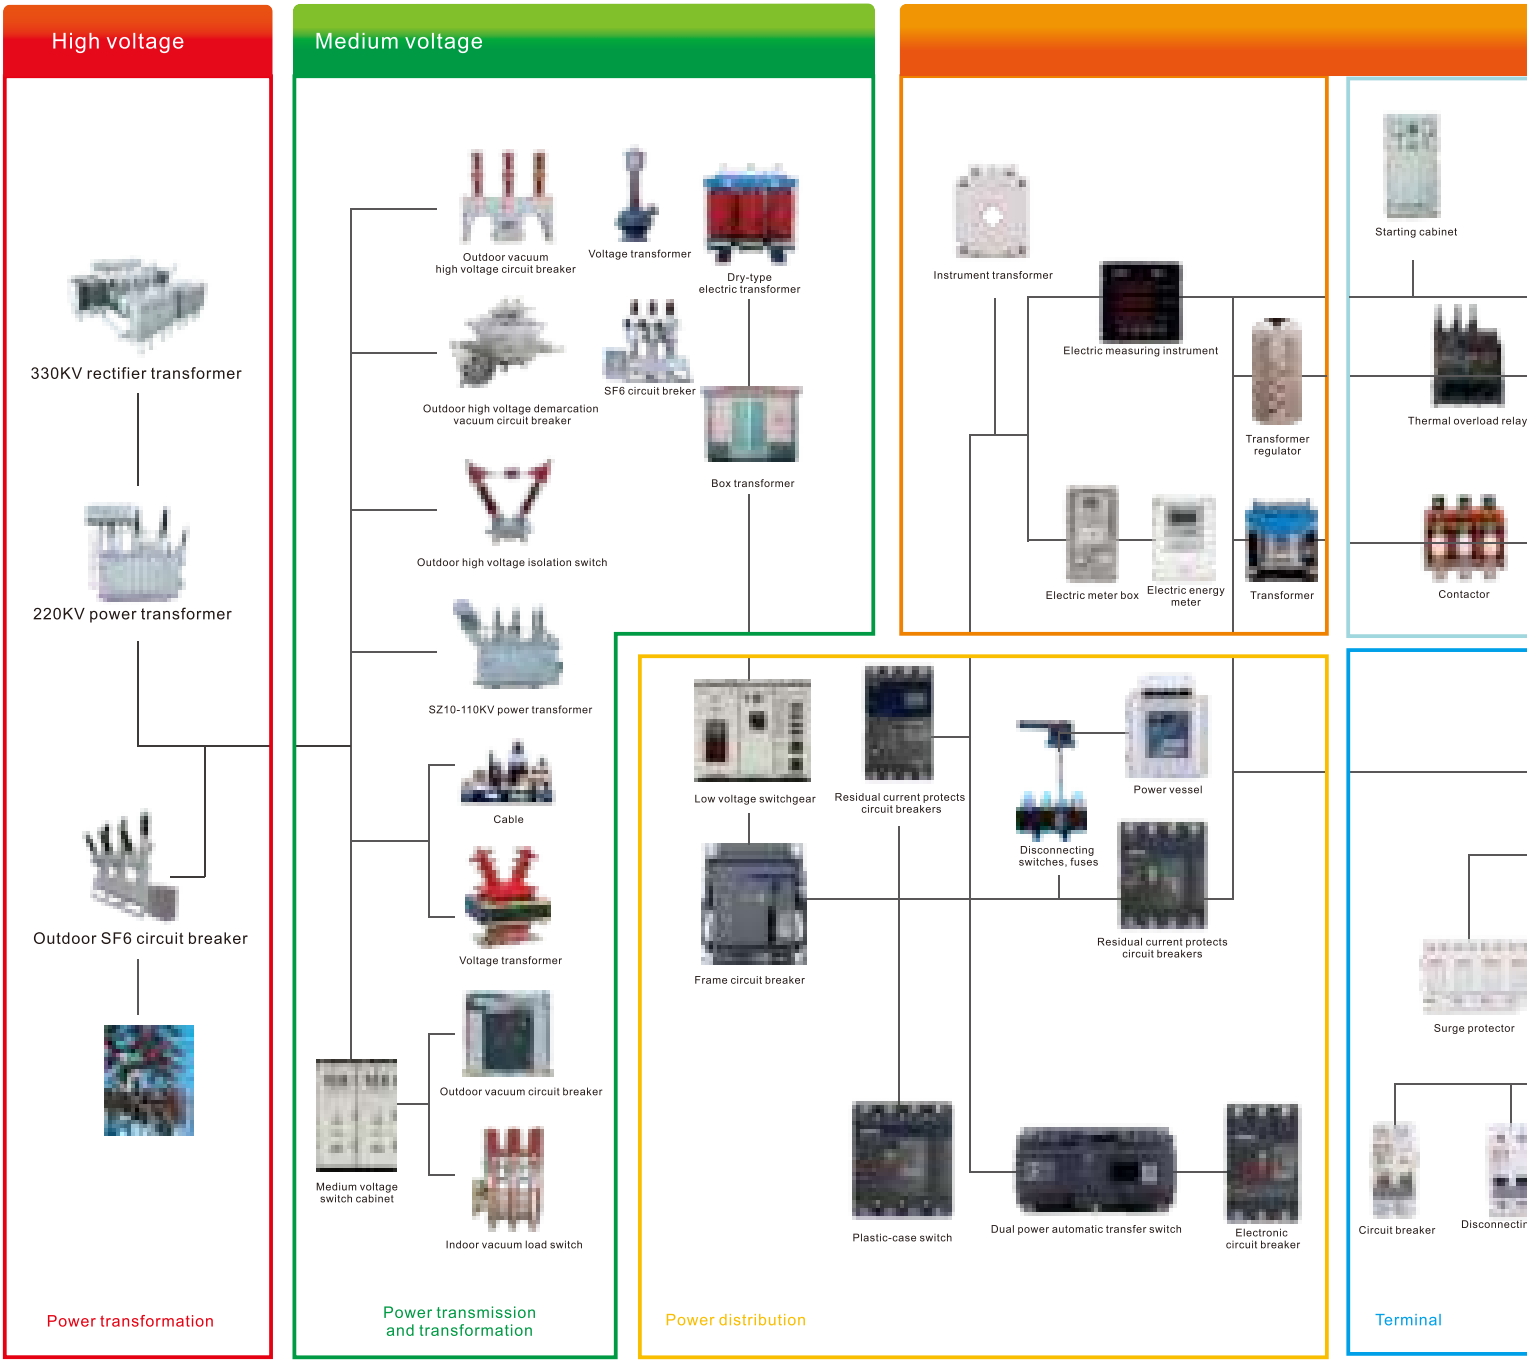
Constantly Producing High-Efficiency Electricity

Intelligent and Safe System Integration Provides New Impetus

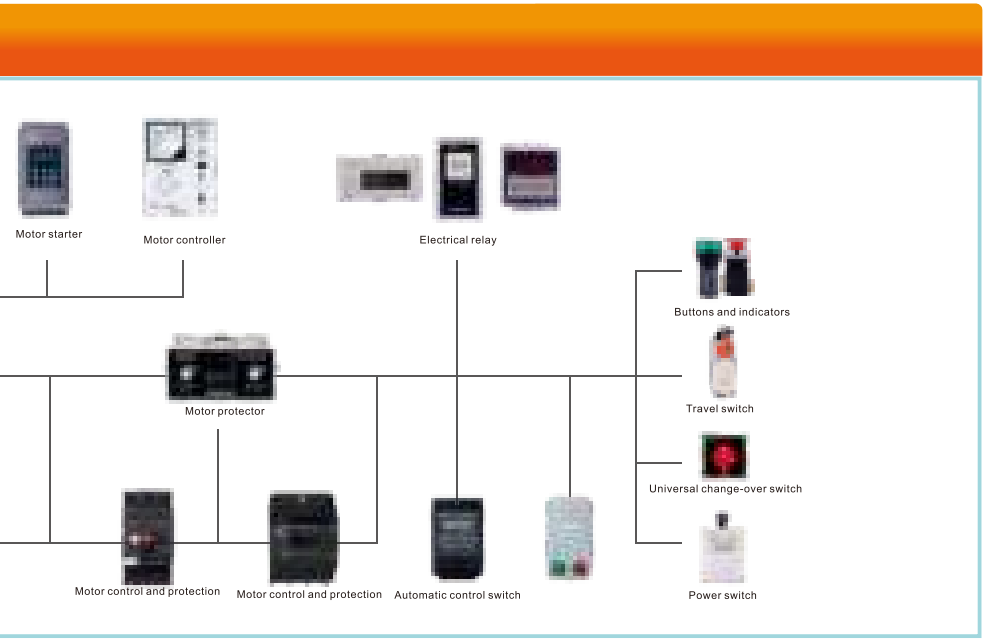
Green and Environmentally Friendly Clean Energy Ensures Sustainable Development

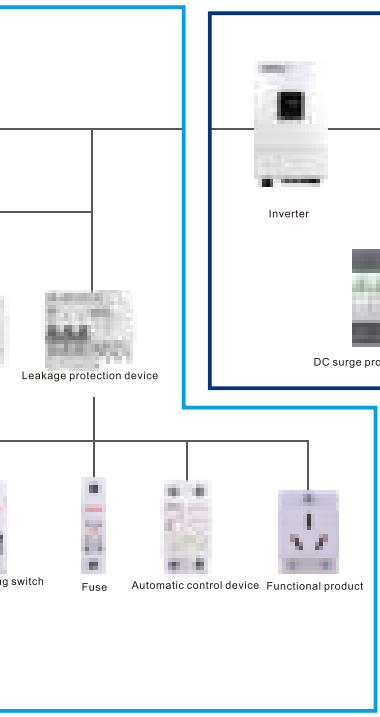
Electrical System for Intelligent Manufacturing

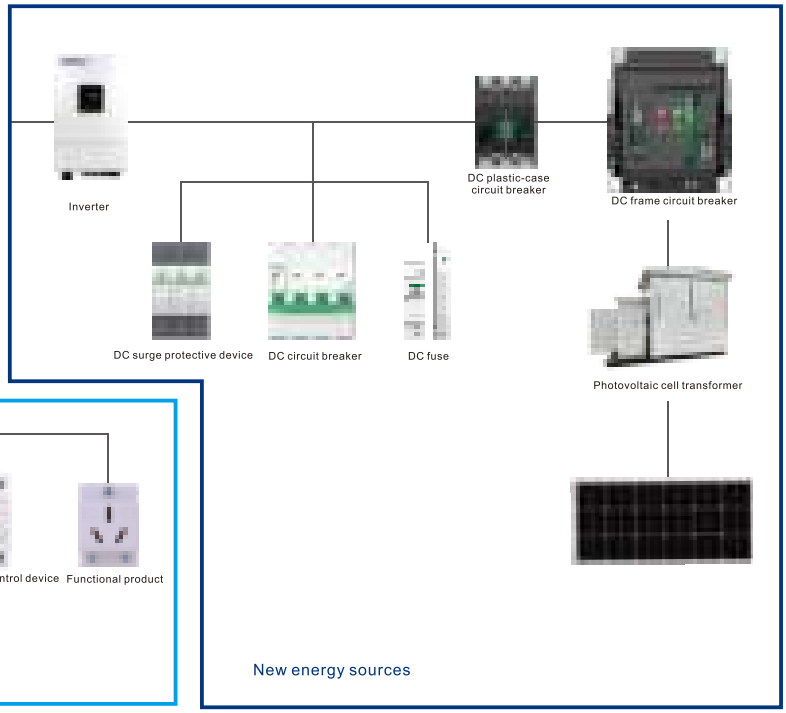
People's electrical appliances continue to serve the fields of "power generation", "transmission", "transformation", "distribution" and "electricity consumption", making electricity safer, more environmentally friendly and more intelligent.



PEOPLE
ELECTRIC







Relying on big data, cloud computing, artificial intelligence technology and smart grid, the company aims to be a smart power equipment industry chain system solution provider for power generation, transmission, storage, reverse, transformation, distribution and utilization, focusing on the development of efficient, reliable, technology-intensive electric components and high-end complete sets of electrical equipment.

RDW8DC series DC intelligent universal circuit breaker

Higher breaking and short-time tolerance

A full range of Icu, Ics, Icw, up to 120kA, leading the industry in performance,Meet the continuity and stability of power supply.

Excellent long life and reliability

Maximum mechanical life up to 20,000 times, electrical life up to 7,000 times, Innovative arc-extinguishing chamber design, truly achieve zero arc-flying.

Improved protection and selectivity

2500, 4000 two shell frames provide more selectivity, impact withstand voltage up to 12kV, Meet more industry requirements.

Multifunctional intelligent controller

LCD display intelligent controller for complete protection, measurement, Maintenance and communication functions.

RDW8DC series DC intelligent universal circuit breaker

Product overview

RDW8DC series universal circuit breaker (hereinafter referred to as circuit breaker), suitable for DC, rated current 800A~4000A, rated insulation voltage DC1500V, rated working voltage DC500V/750V, DC1000V/1500V/ distribution network. Used to distribute power and protect lines and power equipment from overload, undervoltage, short circuit and other faults; It also has reliable isolation function. Circuit breakers have a variety of protection functions, While achieving highly accurate selective protection, it can also avoid unnecessary power outage and improve the reliability and safety of the power supply system. The circuit breaker has the selective protection function to realize the inter-circuit breaker Hierarchical coordination protection and backup protection to reduce the accident scope of the power grid. Therefore, it is especially suitable for the protection system of large capacity DC current power supply.

Products comply with: GB/T 14048.2 standard.

Selection guide

RDW8	DC	25	16	3	H	Drawer level	AC230V	No undervoltage	A1
Product code	Breaking grade	Frame current	Rated current	poles	Controller	Installation mode	Control voltage	Attachments	Connection mode

RDW8DC default standard configuration: shunt, closing, electric operation, 4 group conversion, door frame, interphase partition

For example: need to order a RDW8DC-2500, three pole drawer, rated current 1250A, intelligent controller for R type,

control voltage AC230V, wiring mode A1,

Expressed as: RDW8DC-25 12/3R drawer level AC230V without undervoltage A1.

RDW8DC series DC intelligent universal circuit breaker

Normal working conditions and installation conditions

Normal working condition

☐ The ambient air temperature is -5°C ~ +40°C, and the average value of 24h does not exceed +35°C;
Note: If the upper limit exceeds +40 ℃ or the lower limit is lower than -5 ℃, the user needs to negotiate with the manufacturer.
☐ The elevation of the installation site does not exceed 2000m;
Note: Consult with the manufacturer for the circuit breaker used in the working environment with an altitude of more than 2000m.
☐ The relative humidity of the atmosphere does not exceed 50% when the ambient air temperature is +40°C;
It can have higher relative humidity at lower temperatures;
For example, the wettest month has an average maximum relative humidity of 90%, while the The average minimum temperature of the month is +20 ℃, and treatment measures should be taken for the occasional condensation due to temperature changes.
☐ The pollution level is 3;
☐ When the rated working voltage of the main circuit is DC750V ~ DC1500V, the control circuit and auxiliary circuit need to be isolated from the main circuit by transformer, and the maximum working voltage of the control circuit and auxiliary circuit is AC400V, control circuit and auxiliary circuit installation category is III;
☐ The circuit breaker is suitable for electromagnetic environment A;
☐ Use category B.

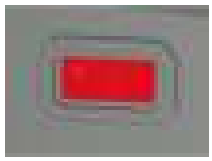
Normal installation condition

☐ Installation of fixed circuit breaker: The circuit breaker is placed in the distribution cabinet and secured with M10 (more than 2500A shell frame) bolts and washers. The circuit breaker is installed smoothly without additional mechanical stress Avoid circuit breaker damage or poor contact of main busbar;
☐ Installation of drawer type breaker: Remove the circuit breaker body from the drawer seat, install the drawer seat in the distribution cabinet first, and tighten with M10(more than 2500A shell frame) bolts and washers. Circuit breaker mounting level Stable, there should be no additional mechanical stress, so as to avoid circuit breaker damage or poor contact between the main bus and the secondary circuit,' after the completion of the circuit breaker body into the drawer seat connection position;
☐ The circuit breaker should be installed in a place without explosion risk and conductive dust, without enough to corrode metal and destroy insulation;
☐ The protection level is IP20. When the circuit breaker is installed in the cabinet and the door frame is installed, the protection level can reach IP40.
Normal storage and transport conditions
☐ The lower limit of temperature is not less than -25°C, the upper limit is not more than +55°C; Relative humidity (+25°C) does not exceed 95%;
☐ The product should be handled gently during transportation, and should not be inverted to avoid violent collision.

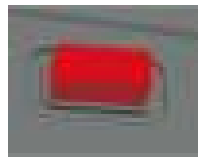
RDW8DC series DC intelligent universal circuit breaker

Circuit breaker operating condition

☐ Operating status of the intelligent controller

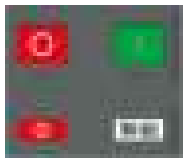


Intelligent controller working status

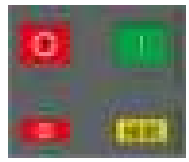


When the intelligent controller is in the protected state,
the circuit breaker is disconnected and the circuit is cleared
After the fault, press this button, the circuit breaker can be closed normally.

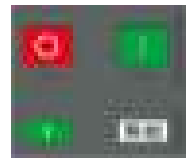
Operating mechanism working status



The circuit breaker is off
and has no energy storage



The circuit breaker is off and
the energy storage is complete



Circuit breaker closed
and no energy storage state

Circuit breaker closed and energy
storage completed state

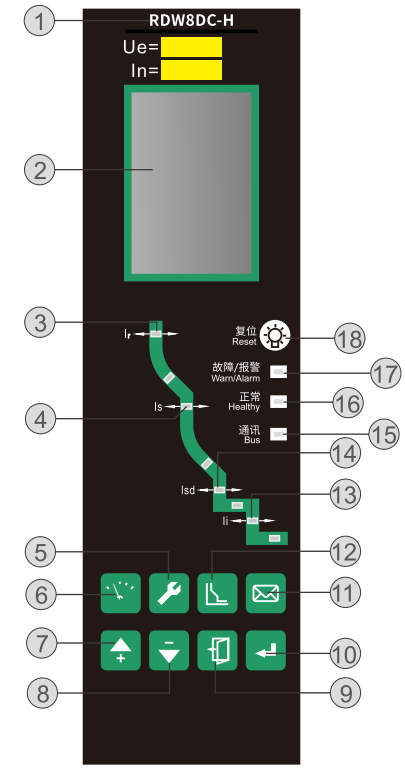
Intelligent controller protection features (liquid crystal type)

Intelligent control page description



RDW8DC Intelligent controller interface

1. Intelligent controller model (corresponding product model);
2. LCD liquid crystal display window: can display each phase current Value, voltage value, setting parameter, fault current Flow, trip time and information query parameters;
3. Overload long delay fault indication;
4. Short circuit short delay inverse time fault indication;
5. Setting key: Quickly switch to the parameter setting main menu, (in the password input interface is "To right" key);
6. Measurement key: Quickly switch to the measurement default main menu, (under the password input interface is"Left" key);
7. Up key: Move the menu content up at the current level, or change the selection up Parameters;
8. Down key: Move menu contents down at the current level, or change the selection down Parameters;
9. Back key: Exit the current level to enter the upper-level menu, or cancel the current parameter The selection of;
10. Ok key: Enter the next level menu that the current item points to, or proceed to the current parameter Select, store the changes made;
11. Query key: Switch to the history and maintenance theme menu;
12. Protection parameter setting key: Switch to the protection parameter setting theme menu;
13. Short circuit instantaneous fault indication;
14. Short-circuit short-delay fixed time fault indication;
15. Communication instruction :Profibus: no communication when off, communication constant light;
16. Modbus: turns off when no communication is available and blinks when communication is available. Normal indication: in the power state, the working state is normal, the LED is always green flashing;
17. Fault/alarm indicator: the "fault/alarm" LED does not light up during normal operation; breakdown When tripping, the "Fault/alarm" LED is red and flashes rapidly; In case of alarm When the LED red constant bright;
18. Reset button: When the intelligent controller is in the fault/alarm state, it needs to restore to normal work State, press this key to clear the intelligent controller fault/alarm indication.

RDW8DC series DC intelligent universal circuit breaker

Intelligent control protection features

□ Overload long delay protection

The overload long delay protection function is generally used to protect the cable from overload, and the protection is based on the true RMS of the current. Overload long delay inverse time protection, setting current Ir adjustable; The delay time tr is adjustable; peculiarity Multi-curve adjustable, respectively, general type (I^2t), very inverse time (It), high voltage fuse matching type (I4t) to meet the upstream and downstream overload protection selectivity and matching needs.

Table 1 Setting parameters related to overload long delay protection

	Setting range		remark
	Distribution mode	Generator type	
Long delay action current set Ir	(0.4 ~ 1.0)In(step 1A)	(0.4 ~ 1.2)In(step 1A)	
Long delay time set value tr:	I^2t:tr=(15~480)s Universalinverse Timeprotection(I=1.5Ir)	I^2t: tr =(8 ~ 60)s Universal inverse Time protection (I=1.3Ir)	Protection curve Type selection
	It:tr=(10to120)s Fastinversetime(I=1.5Ir)	It:tr=(10to120)s Fastinversetime(I=1.5Ir)	
	I4t: tr =(60 to 1440)s High voltage fuse compatibility (I=1.5Ir)	I4t: tr =(60 to 1440)s High voltage fuse compatibility (I=1.5Ir)	
Programmable DO output	Set a DO to "Long delay Failure" (optional)		
memory	Off, 10 minutes, 20 minutes, 30 minutes, 45 minutes, 1h, 2h, 3h Optional, power off can be cleared		

Type	Peculiarity	Current multiple (I/Ir)	Set time	Actual operating time	Delay tolerance
Power distribution	Inaction characteristic	<1.05	>2h inaction	-- ---	-- ---
	Action characteristic	>1.3	<1h action	-- ---	-- ---
	Action characteristic	1.5	(15～480)s (10~120)s (60~1440)s	(15～480)s (10~120)s (60~1440)s	±10%
	Action delay	>1.5	---	See calculation formula	±10%
Generator of electricity	Inactive characteristic	<1.05	>2h inaction	-- ---	-- ---
	Action characteristic	>1.15	<1h action	-- ---	-- ---
	Action characteristic	1.3	(8～60)s	(8～60)s	±10%
		1.5	(10～120)s (60~1440)s	(10～120)s (60~1440)s	
	Action delay	>1.3	---	See calculation formula	±10%

RDW8DC series DC intelligent universal circuit breaker

☐ Short delay protection

The short delay protection prevents the impedance short circuit of the distribution system, which is generally caused by the local short circuit fault of the line, and the current generally exceeds the range of overload, but the short circuit current is not very large. Short-circuit delay The trip delay is to achieve selective protection, is based ON current true RMS protection, there are two ways (the user can choose one of them when ordering) : I^2t ON, distribution protection, When I≤8Ir, act according to the inverse time limit; When I>8Ir1, the operation is limited according to the time limit. When the generator is protected, when I≤2Ir, act according to the inverse time limit; When I>2Ir1, act according to the specified time limit; tsd indicates short delay Setting time, Ir indicates the long delay setting current, I indicates the current fault current. I^2t OFF, fixed time protection. (The user does not specify, supply in this way).

Table 2 Short delay setting parameters

Type	Parameter name	Setting range	Set the step size
Power distribution	Action current setting Isd	(0.4～15)In+OFF	1A
	Fixed action time tsd	0.1～0.6s	0.1s
	Inverse time delay time T Delay time accuracy (±10%)	tsd x (8 x Ir/I)2(curve I2t)	---
		Long delay 1/10 of the delay time (curve It, I4t)	---
alternator	Action current setting Isd	(0.4～15)In+OFF	1A
	Fixed action time tsd	0.1～0.6s	0.1s
	Inverse time delay time T Delay time accuracy (±10%)	tsd x (8 x Ir/I)2(curve I2t) Later changed to tsd x (2 x Ir/I)2(curve It)	---
		Long delay 1/10 of the delay time (curve It I4t)	---
Programmable DO output	Programmable DO output	Set a DO to Short Delay Failure (optional)	

Table 3 Short delay setting parameters

Peculiarity	Current multiple (I/IS)	Set a trip time	Delay tolerance
Inactive characteristic	<0.9	Inaction	---
Action characteristic	≥1.1	Action	±10%

Note: Late change short delay inverse time time is not lower than the fixed time time.

☐ Instantaneous protection feature

The instantaneous protection function prevents short circuit of the power distribution system, which requires quick disconnection due to high current. This protection is based on the instantaneous value of the current.

Table 4 Setting parameters related to instantaneous protection

Parameter name	Setting range	Set the step size
Action current setting Ii	(1.0～20)In+OFF;Ii≦42kA	1A(Imn = 2500A)；1A(Imn = 4000A)
Programmable DO output	Set a DO to Instantaneous failure (optional)	

RDW8DC series DC intelligent universal circuit breaker

Table 5 Instantaneous protection action characteristics

peculiarity	Current multiple (I/Ii)	Set a trip time	Delay tolerance
Inactive characteristic	<0.85	ination	---
Action characteristic	>1.15	ation	---
Action delay	≥1.15	<30ms	---

☐ Overload warning function

Used for monitoring important loads. An additional function of the intelligent controller, when the circuit breaker current rises and exceeds the setting value of the forecast alarm current, the forecast alarm signal is sent after a delay of a period of time, and the forecast alarm light is forecast at this time Steady on; When more than a certain time (tp), the forecast alarm light shines, and the relay output signal; When the current drops below the set value or the overload trip, the alarm function is reset after a delay of a period of time. Overload preload The alarm can be turned on and off.

Table 6 overload forecasting alarm setting parameters

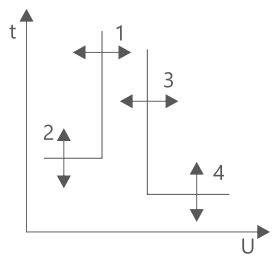
Parameter name	Setting range	Set the step size
Operating current Setting Ip(A)	(0.7~1.2)Ir	1A
Setting time tp(s)	(0.4~0.9)tr	1s
Return alarm current set value: (A)	0.9Ip	1A
Return time setting value: (s)	1~100	1s
Programmable DO output	Set a DO to Overload Alarm (optional)	

Table 7 overload forecasting alarm action characteristics

peculiarity	Current multiple (I/Ii)	Set a trip time	Delay tolerance
Inactive characteristic	<0.9	Inaction	---
Action characteristic	>1.1	Action	---
Action characteristic	≥1.1		±10%(inherent absolute error ±40ms)

Undervoltage protection

☐ Action rules for undervoltage protection



1: indicates the action threshold
2: action delay time
3: Returns the threshold
4: Returns the delay time

Figure 1 Action principle of undervoltage protection

When the voltage is less than the action threshold (1) start the alarm or trip delay, the action delay time (2) send the alarm or trip signal, undervoltage trip or undervoltage fault DO action; When the voltage is greater than the return threshold (3) Start the return delay, when the return delay time (4) to remove the alarm, undervoltage failure DO return.

RDW8DC series DC intelligent universal circuit breaker

Undervoltage protection Setting parameters

Table 8 Parameters related to undervoltage protection Settings

Parameter name	Setting range	Set the step size	remark
Protect startup Settings	80V～UmaxV	1V	Umax is set according to the rated voltage
Protection action delay time set	0.2～60s	0.1s	
Protection Action Returns the delayed setting value	Action Setting Value ~ UmaxV	1V	This setting is available only when the execution mode is alarmValue. The returned value must be greater than or equal to the start value
Protection return delay time	0.2～60s	0.1s	
Protect alarm DO output	Set a DO to "undervoltage fault" (if this is not set, the alarm information can only be read from the controller display, no contact output)		
Execution mode	Alarm/trip/shutdown		

Undervoltage protection action characteristics

Table 9 Operating characteristics of undervoltage protection

Peculiarity	Current multiple (U/ action setting)	Set a trip time	Delay tolerance
Non action characteristic	>1.1	inaction	
Action characteristic	<0.9	Action	
Action characteristic	≤0.9	The fixed time feature is equal to the set delay time	±10%(inherent absolute error ±40ms)

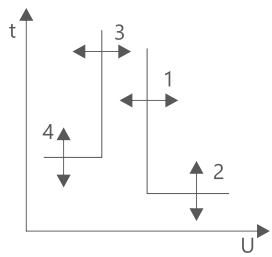
undervoltage protection alarm return value

Table 10 Undervoltage protection alarm return characteristics (only when the execution mode is "alarm")

Peculiarity	Current multiple (U/ action setting)	Set a trip time	Delay tolerance
Nonreturn characteristic	<0.9	not return	
Return characteristic	>1.1	Back	
Return delay	≥1.1	The fixed time feature is equal to the set delay time	±10%(inherent absolute error ±40ms)

Overvoltage protection

☐ Action rules for overvoltage protection



1: indicates the action threshold
2: action delay time
3: Returns the threshold
4: Returns the delay time

Figure 2 Action principle of overvoltage protection

When the voltage is greater than the action threshold (1) start the alarm or trip delay, the action delay time (2) send an alarm or trip signal, over voltage trip or undervoltage fault DO action; When the voltage is less than the return threshold (3) Start the return delay, when the return delay time (4) to remove the alarm, undervoltage failure DO return.

RDW8DC series DC intelligent universal circuit breaker

Set overvoltage protection parameters

Table 11 Settings of overvoltage protection parameters (the undervoltage setting must be smaller than the overvoltage setting)

Parameter name	Setting range	Set the step size	Remark
Protect startup Settings	80V～UmaxV	1V	Umax is set according to the rated voltage
Protection action delay time set	0.2～60s	0.1s	
Protection Action Returns the delayed setting value	80V ~ Action setting value	1V	This setting is available only when the execution mode is alarmValue. The returned value must be greater than or equal to the start value
Protection return delay time	0.2～60s	0.1s	
Protect alarm DO output	Set a DO to "Overvoltage fault" (if this is not set, the alarm information can only be read from the controller display, no contact output)		
Execution mode	Alarm/trip/shutdown		

Overvoltage protection action characteristics

Table 12 Operating characteristics of overvoltage protection

Peculiarity	Current multiple (U/ action setting)	Set a trip time	Delay tolerance
Inactive characteristic	<0.9	Inaction	
Action characteristic	>1.1	Action	
Action characteristic	≥1.1	The fixed time feature is equal to the set delay time	±10%(inherent absolute error ±40ms)

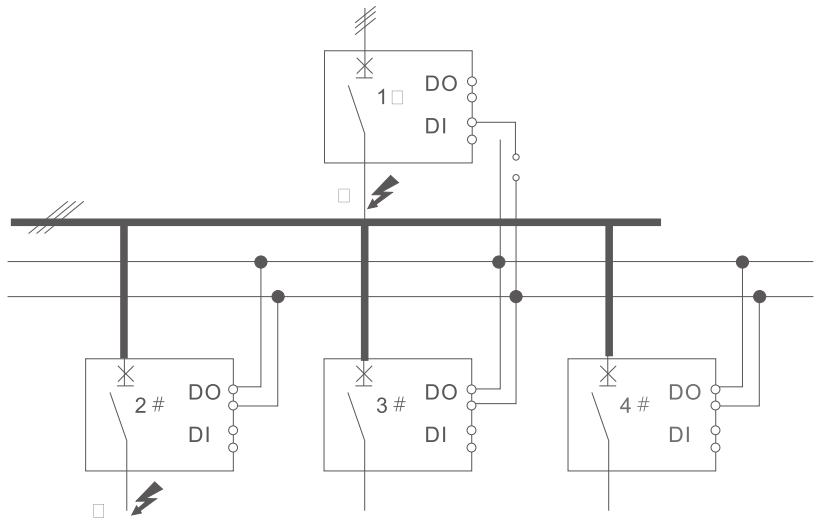
Overvoltage protection alarm return feature

Table 13 Overvoltage protection alarm return characteristics (this feature is available only when the execution mode is "alarm")

Peculiarity	Current multiple (U/ action setting)	Set a trip time	Delay tolerance
Nonreturn characteristic	>1.1	No Return	
Return characteristic	<0.9	Return	
Return delay	≤0.9	The fixed time feature is equal to the set delay time	±10%(inherent absolute error ±40ms)

RDW8DC series DC intelligent universal circuit breaker

Regional Chain (Zsl)



Regional linkage diagram

Regionally selective linkage includes short-circuit linkage. In the same power circuit with two or more connected circuit breakers:
When the short-circuit fault occurs at the outlet side of the lower circuit breaker (2# ~ 4# circuit breaker) (such as position ②), the lower circuit breaker instantaneously trips, and sends a regional interlocking trip signal to the upper circuit breaker; Upper cutThe breaker (1# circuit breaker) receives the zone interlocking trip signal and delays according to the short-circuit protection setting. If the fault current is eliminated during the delay of the upper circuit breaker, the protection returns and the upper circuit breaker does not operate. Jauxia If the fault current is not eliminated after the circuit breaker trips, the upper circuit breaker acts according to the short-circuit protection setting and cuts out the fault line.
When the short-circuit fault occurs between the upper circuit breaker (1# circuit breaker) and the lower circuit breaker (2# ~ 4# circuit breaker) (such as position ①), the upper circuit breaker does not receive the regional chain signal, and therefore instantaneous tripping. Fast removal of faulty lines.
Parameter setting: At least one DI of the upper circuit breaker is set to regional chain detection. At least one DO of the lower circuit breaker is set as a regional chain signal output.

Communication function

The controller can realize "four remote" data transmission functions such as telemetry, remote control, remote adjustment and remote communication through the communication port according to the specified protocol requirements. For details, please read the "DC Frame Circuit Breaker Communication Protocol".

Table 14 Communication parameter Settings

Communication protocol	MODBUs
Correspondence address	1~247(take part)
Baud rate (bit/s)	4.8k、9.6k、19.2k、38.4k

RDW8DC series DC intelligent universal circuit breaker

Test function

Test trip: you can use analog current to do no trip test, simulate long delay, short delay, instantaneous protection mode to test;
Action tests can also be performed directly in order to detect the controller and circuit breaker In addition, the programmable output module can also be simulated.

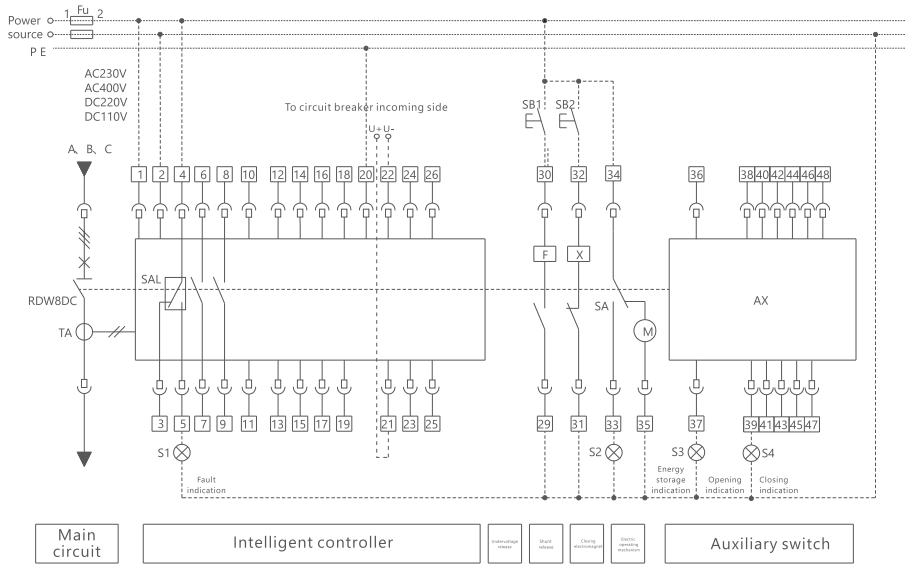
Thermal memory protection

Repeated overload may cause heat of conductors or equipment, the controller simulates the heating condition, and has a thermal effect (simulating bimetal characteristics) after fault delay actions such as overload long delay and short short delay. Over duty The long delay thermal effect energy is released 30 minutes after the fault is removed, and the short delay thermal effect energy is released 15 minutes after the fault is removed. During this period, if the circuit breaker is closed again, overload long delay and short delay occur If the circuit is short delay, the delay action time becomes shorter, which can make the line or equipment get more appropriate protection. If the controller is powered off once and then powered on, the accumulated heat effect is cleared.

Self-check function

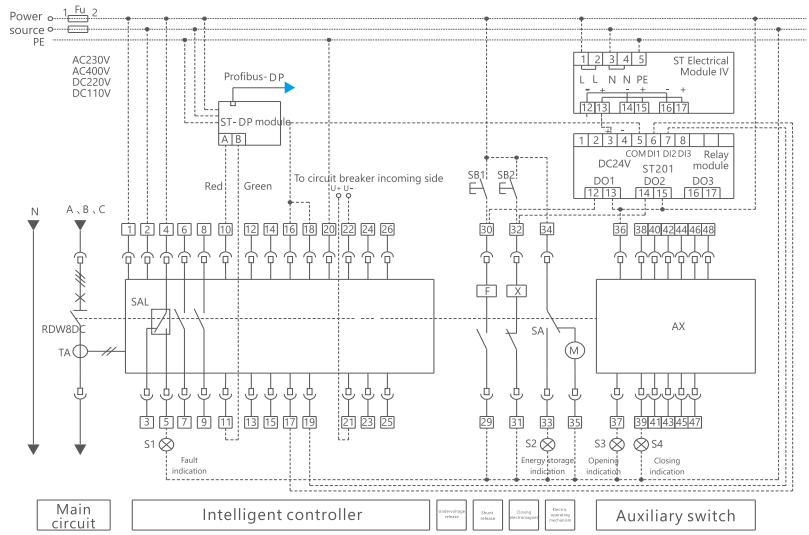
DC intelligent controller with system self-test function, built-in temperature sensor, magnetic flux break monitoring circuit, A/D conversion monitoring circuit. The intelligent controller periodically monitors the operation of the system and displays in case of failure The corresponding error information, at the same time can send an alarm signal.

Rdw8dc-250/4000 R type secondary circuit wiring diagram



RDW8DC series DC intelligent universal circuit breaker

Rdw8dc-250/4000 H type secondary circuit wiring diagram



Note: The dotted part is connected by the user. If the intelligent controller, shunt trip device, closing electromagnet, electric operating mechanism and other voltages are different, different power supplies should be connected respectively. The rated working voltage of the main circuit is DC500V~DC1500V The control circuit and auxiliary circuit need to be isolated from the main circuit with a transformer, and the maximum operating voltage of the control circuit and auxiliary circuit is AC400V.

RDW8DC-2500/4000 auxiliary switch type (default is four sets of transfer contacts)

Accessory functions and features

RDW8DC-2500 ~ 4000 Close the electromagnet

☐ Close the electromagnet

When the circuit breaker completes the storage operation and is in the normal opening state, the circuit breaker can be controlled remotely by the closing electromagnet to close the circuit breaker quickly.

Operating voltage Us	AC230V	AC400V	DC220V	DC110V
Operating voltage range	(85～110)%Us			
Starting current	1.3A	0.7A	1.3A	2.5A
Suction time	≤60ms			

RDW8DC-2500 ~ 4000 shunt trip device

☐ Shunt trip device

When the circuit breaker is in the closing state, the shunt trip device can be used to remotely control the circuit breaker to quickly disconnect.

Operating voltage Us	AC230V	AC400V	DC220V	DC110V
Action voltage range	(70～110)%Us			
Starting current	1.3A	0.7A	1.3A	2.5A
Suction time	≤30ms			

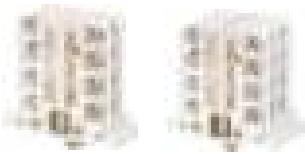
RDW8DC-2500 ~ 4000 energy storage motor

☐ Energy storage motor

To realize electric circuit breaker energy storage and automatic re-energy storage operation after circuit breaker closing, so that the circuit breaker can be re-closed immediately after breaking Operate.

Operating voltage Us	AC230V	AC400V	DC220V	DC110V
Operating voltage range	(85～110)%Us			
Energy storage time	5s			
RDW8DC-2500	110VA		110W	
RDW8DC-4000	150VA		150W	

Note: Manual energy storage can also be performed during circuit breaker maintenance



RDW8DC-2500 ~ 4000 auxiliary switch

☐ Auxiliary contacts

Default configuration: Four sets of conversion contacts

Other types: four normal open four normal close, six groups of conversion contacts, six normal open six normal close

Operating voltage Us	AC230V	AC400V	DC220V	DC110V
Conventional heating current	6A			
Rated control capacity	300VA		60W	

RDW8DC series DC intelligent universal circuit breaker

Interphase partition

☐ Interphase partition

It is vertically installed between the bus terminals of each phase of the circuit breaker to enhance the insulation between phases of the circuit breaker.

Break locking device

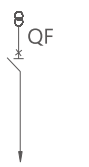
☐ Phase disconnect locking device

The switch button of the circuit breaker is locked in the press position, and the circuit breaker cannot be closed.

Note 1: When you need to pull out the key, you must first hold down the opening button and then turn the key counterclockwise to pull out the key;
Note 2: The following list in the power supply mode is for reference only.
Interlocks can be installed according to the actual power supply system needs on site, or consult the manufacturer for consultation.

Mode 1: One power supply and one load interlock

Circuit diagram



Possible modes of operation

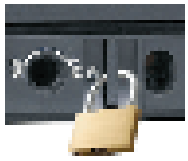
Door frame

☐ Door frame

The door frame is installed on the door where the circuit breaker is installed in the power distribution cabinet, which plays a sealing and beautiful role, and the protection level can reach Ip40.



Drawer operation padlock

☐ Drawer operation padlock

When the body of the drawer circuit breaker is in the "separate" position, pull out the card plate and lock it with the padlock. After locking, the body can not be shaken to the "test" or Connect location. (Padlock user provided).

Relay module

☐ Relay module

Input voltage: DC24V

Contact capacity: AC250V 10A; DC28V10A When the load capacity of the control circuit breaker is large, it needs to be converted by the relay module and then controlled.The installation method is 35mm standard guide rail or direct installation.

RDW8DC series DC intelligent universal circuit breaker

Voltage conversion module

☐ Voltage conversion module

1. The voltage conversion module is designed to extend the voltage measurement range of the intelligent controller. This module can be used for expansion when the bus voltage is high Exhibition. The module must be used together with the controller.

Location Door interlock

☐ The location door is interlocked

When the drawer type circuit breaker body is in the "test" or "connection" position, the cabinet door is prohibited to open, and when the circuit breaker body is in the "separation" position, Allow the cabinet door to open.

☐ Mechanical interlocking

Inter locking of two flat circuit breakers or interlocking of two stacked circuit breakers.

Only one circuit breaker can be used for each load of the two power supplies

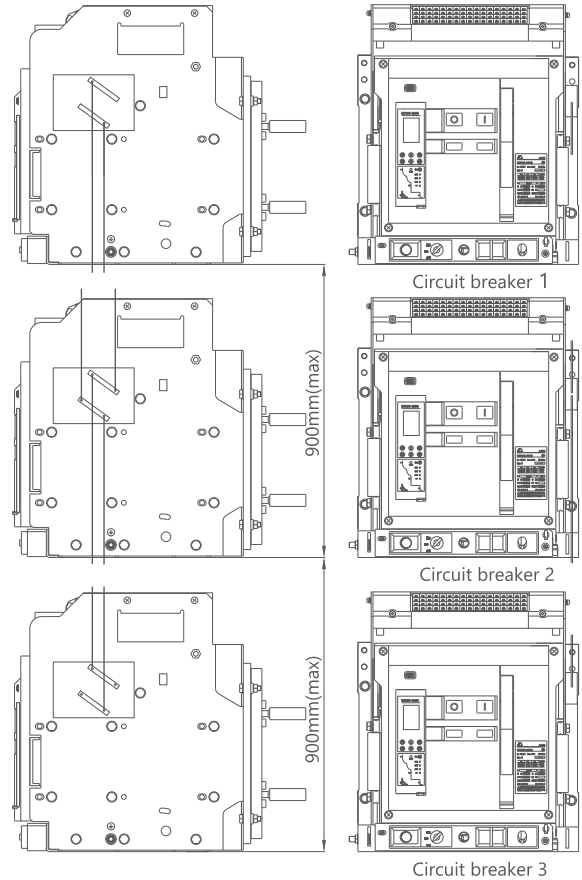
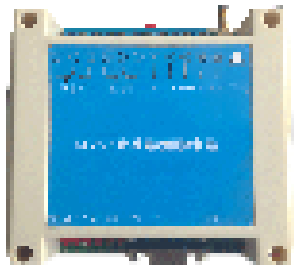
Note: The transition arc at the interlocking bend of the steel cable is not less than R120mm





Remote controller

☐ Remote controller

To meet the user's RDW8DC products wireless remote control or remote alarm to the user, remote control, remote alarm to SMS command execution, short The message content can be customized by users.

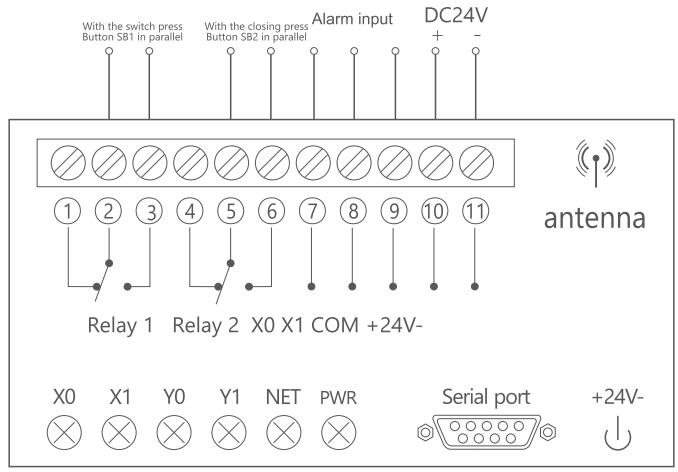
Applications: unattended room monitoring and remote maintenance in power industry, telecommunications industry, etc.

Alarm input signal: can be connected to smoke, infrared, switch detection sensors, to achieve SMS alarm function, when there is an alarm signal, can be more A mobile phone sends a short message to remind, and then the user sends a short message command to the remote controller for control.

Installation method: 35mm standard guide rail stuck in the installation

RDW8DC series DC intelligent universal circuit breaker

Remote controller wiring diagram



☐ Description of remote controller terminals

① and ③ are the output terminals of relay 1, and ② are the input terminals of relay 1, which can be connected to AC230/400V load and the output current is 5A; X0 is the indicator light of relay 1, the light is on (1), (2) disconnect, (2), (3) close.

④, ⑥ is the output terminal of relay 1, ⑤ is the input end of relay 2, which can be connected to AC230/400V load, and the output current is 5A; X1 is the indicator light of relay 2, the light is on ④, ⑤ disconnect, ⑤, ⑥ close.

⑦ ~ ⑨ is the input end of two alarm signals, and ⑨ is the public end, which is connected with smoke, infrared, detection sensors; Y0 is 7, ⑨ alarm light, Y1 is 8, ⑨ alarm light, the light indicates that there is signal input.

⑩ Input power to the remote controller. There is also an input power supply at the lower end, and the remote controller will work normally with a voltage of DC24V.

NET is a network indicator. After the installation is correct and the power is turned on, the NET indicator blinks once every second, indicating that the network is being sought. When the NET indicator blinks from 1 second to 3 seconds, the remote controller is successfully connected to the network Perform remote control.

PWR indicates the power indicator. When the indicator is steady on, it indicates that the power supply is normal and can work properly.

The serial port is the data interface for connecting the computer to the remote controller for various Settings. Drivers and special configuration software need to be installed.

The antenna is configured for the remote controller to have a better reception of network signals, so that it can work normally in the place where the network signal is not good, and the antenna length is 2m.

RDW8HU series high voltage intelligent universal circuit breaker

Higher breaking and short-time tolerance

A full range of Icu, Ics, Icw, up to 85kA, leading the industry in performance,Meet the continuity and stability of power supply.

Excellent long life and reliability

Maximum mechanical life up to 20,000 times, electrical life up to 7,000 times, Innovative arc-extinguishing chamber design, truly achieve zero arc-flying.

Improved protection and selectivity

2500, 4000, 6300 three shell frames provide more selectivity and impact pressure resistance Up to 12kV, to meet more industry requirements.

Multifunctional intelligent controller

LCD display intelligent controller for complete protection, measurement, Maintenance and communication functions.

RDW8HU series high voltage intelligent universal circuit breaker

Product overview

RDW8HU series universal circuit breaker (hereinafter referred to as circuit breaker), suitable for AC 50Hz/60Hz, rated current 630 ~ 6300A, rated insulation voltage 1250V, rated working voltage of AC800, Ac1000, In the AC1140V distribution network, it is used to distribute power and protect lines and power equipment from overload, undervoltage, short circuit, single-phase grounding and other faults, and it has isolation function. Circuit breakers have a variety of The protection function, while achieving highly accurate selective protection, can also avoid unnecessary sudden power failure, improve the reliability and safety of the power supply system. Products comply with: GB/T 14048.2 standard.

Selection guide

RDW8HU default standard configuration: shunt, closing, electric operation, 4 group conversion, door frame, interphase partition

For example: need to order a RDW8HU-2500, three-pole drawer, rated current 1250A, intelligent controller for R type, control voltage AC230V,

Expressed as: RDW8HU-25 12/3R drawer level AC230V without undervoltage.

RDW8HU series high voltage intelligent universal circuit breaker

Normal working conditions and installation conditions

Normal working condition

☐ The ambient air temperature is -5℃ ~ +40℃, and the average value of 24h does not exceed +35℃;
Note: If the upper limit exceeds +40 ℃ or the lower limit is lower than -5 ℃, the user needs to negotiate with the manufacturer.
☐ The elevation of the installation site does not exceed 2000m;
Note: Consult with the manufacturer for the circuit breaker used in the working environment with an altitude of more than 2000m.
☐ The relative humidity of the atmosphere does not exceed 50% when the ambient air temperature is +40℃; It can have higher relative humidity at lower temperatures; For example, the wettest month has an average maximum relative humidity of 90%, while the
The average minimum temperature of the month is +20 ℃, and treatment measures should be taken for the occasional condensation due to temperature changes.
☐ The pollution level is 3;
☐ When the rated working voltage of the main circuit is AC800V ~ AC1140V, the control circuit and auxiliar y circuit need to be isolated from the main circuit by transformer, and the maximum working voltage of the control circuit and auxiliar y circuit is AC400V, control circuit and auxiliar y circuit installation categor y is Ⅲ;
☐ The circuit breaker is suitable for electromagnetic environment A;
☐ Use categor y B.

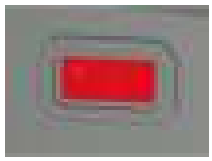
Normal installation condition

☐ Installation of fixed circuit breaker: The circuit breaker is placed in the distribution cabinet and secured with M10(more than 2500A shell frame) bolts and washers.
The circuit breaker is installed smoothly without additional mechanical stress
Avoid circuit breaker damage or poor contact of main busbar;
☐ Installation of drawer type breaker: Remove the circuit breaker body from the drawer seat, install the drawer seat in the distribution cabinet first,
and tighten with M10(more than 2500A shell frame) bolts and washers. Circuit breaker mounting level
Stable, there should be no additional mechanical stress, so as to avoid circuit breaker damage or poor contact between the main bus and the secondar y circuit,
after the completion of the circuit breaker body into the drawer seat connection position;
☐ The circuit breaker should be installed in a place without explosion risk and conductive dust, without enough to corrode metal and destroy insulation;
☐ The protection level is IP20. When the circuit breaker is installed in the cabinet and the door frame is installed, the protection level can reach Ip40.
Normal storage and transport conditions
☐ The lower limit of temperature is not less than -25℃, the upper limit is not more than +55℃; Relative humidity (+25℃) does not exceed 95%;
☐ The product should be handled gently during transportation, and should not be inverted to avoid violent collision.

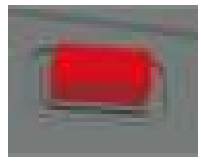
RDW8HU series high voltage intelligent universal circuit breaker

Circuit breaker operating condition

□ Operating status of the intelligent controller

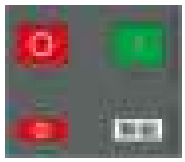


Intelligent controller working status

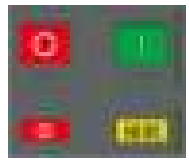


When the intelligent controller is in the protected state,
the circuit breaker is disconnected and the circuit is cleared
After the fault, press this button, the circuit breaker can be closed normally.

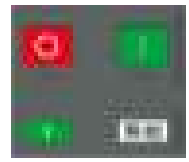
Operating mechanism working status



The circuit breaker is off
and has no energy storage



The circuit breaker is off and
the energy storage is complete



Circuit breaker closed
and no energy storage state

Circuit breaker closed and energy
storage completed state

Drawer seat working condition

RDW8HU series high voltage intelligent universal circuit breaker

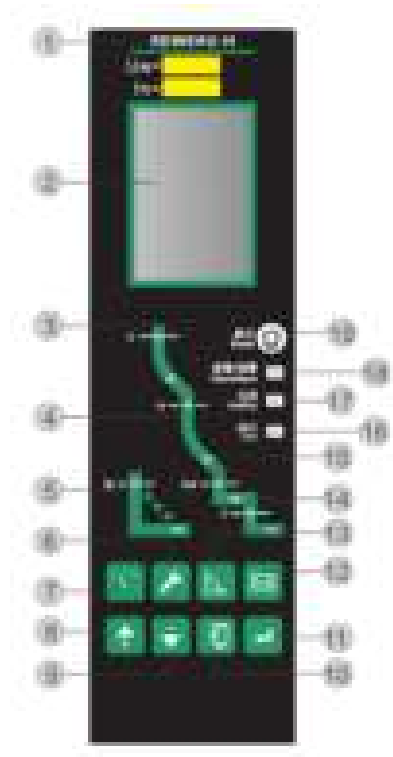
Intelligent controller protection features (liquid crystal type)

Intelligent control page description



RDW8DC Intelligent controller interface

1. **Intelligent controller model** (corresponding product model);
2. **LCD liquid crystal display window**: can display each phase current Value, voltage value, setting parameter, fault current Flow, trip time and information query parameters;
3. **Overload long delay fault indication**;
4. **Short circuit short delay inverse time fault indication**;
5. **Ground or neutral fault indication**;
6. **Setting key**: Quickly switch to the parameter setting main menu, (in the password input interface is"Right" key);
7. **Measurement key**: Quickly switch to the measurement default main menu, (under the password input interface is "Left" key);
8. **Up key**: Move the menu content up at the current level, or change the selection up Parameters;
9. **Down key**: Move menu contents down at the current level, or change the selection down Parameters;
10. **Back key**: Exit the current level to enter the upper-level menu, or cancel the current parameter the selection of;
11. **Ok key**: Enter the next level menu that the current item points to, or proceed to the current parameter Select, store the changes made;
12. **Query key**: Switch to the history and maintenance theme menu;
13. **Protection parameter setting key**: Switch to the protection parameter setting theme menu;
14. **Short circuit instantaneous fault indication;**
15. **Short-circuit short-delay fixed time fault indication;**
16. **Communication indication** :Profibus: no communication when off, communication constant light;
    Modbus: turns off when no communication is available and blinks when communication is available.
17. **Normal indication**: in the power state, the working state is normal, the LED is always green flashing;
18. **Fault/alarm indication**: the "fault/alarm" LED does not light up during normal operation; breakdown When tripping, the "Fault/alarm" LED is red and flashes rapidly; In case of alarm When the LED red constant bright;
19. **Reset button**: When the intelligent controller is in the fault/alarm state, it needs to restore to normal work State, press this key to clear the intelligent controller fault/alarm indication.

Protection features of intelligent controller

☐ The protection feature of intelligent controller has inverse time limit and fixed time limit.

When the fault current exceeds the inverse time limit setting value, the controller delays protection according to the specified time limit。

☐ The inverse time curve conforms to the characteristic curve I^2t

Overload long delay protection feature

Overload long delay protection action threshold

☐ <1.05Ir：>2hnon-trip

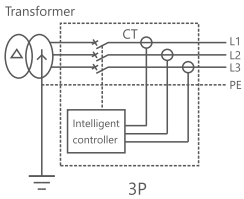
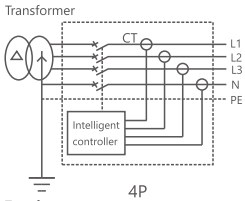
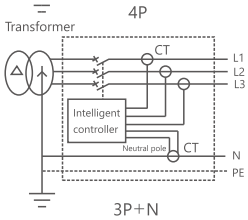
Ground fault protection method and electrical schematic diagram



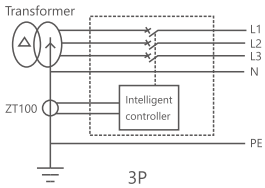
3P



4P



3P+N



3P

Method 1 (difference type)

☐ TN-C, TNC-S and TN-S power distribution systems use three-pole circuit breakers without neutral current transformers。
☐ The ground fault protection signal is the vector sum of the three-phase current。
☐ The protection feature is fixed time or inverse time protection。

Method 2 (difference type)

☐ TN-S power distribution system adopts four-pole circuit breaker and built-in neutral current transformer。
☐ The ground fault protection signal is the four-phase current vector sum。
☐ The protection feature is fixed time or inverse time protection。

Method 3 (Difference type)

☐ TN-S power distribution system uses three-pole circuit breaker and external neutral current transformer。
☐ The ground fault protection signal is the sum of three-phase current and N-phase current vector。
☐ The protection feature is fixed time or inverse time protection。
☐ Note: The length of the neutral current transformer conductor is not greater than 2m。

Mode 4 (ground current mode)

☐ The ground current protection type distribution system uses three-pole circuit breaker and external neutral line current transformer。
☐ Attach a special current transformer。
☐ The distance between the special current transformer and the circuit breaker is not more than 10m。

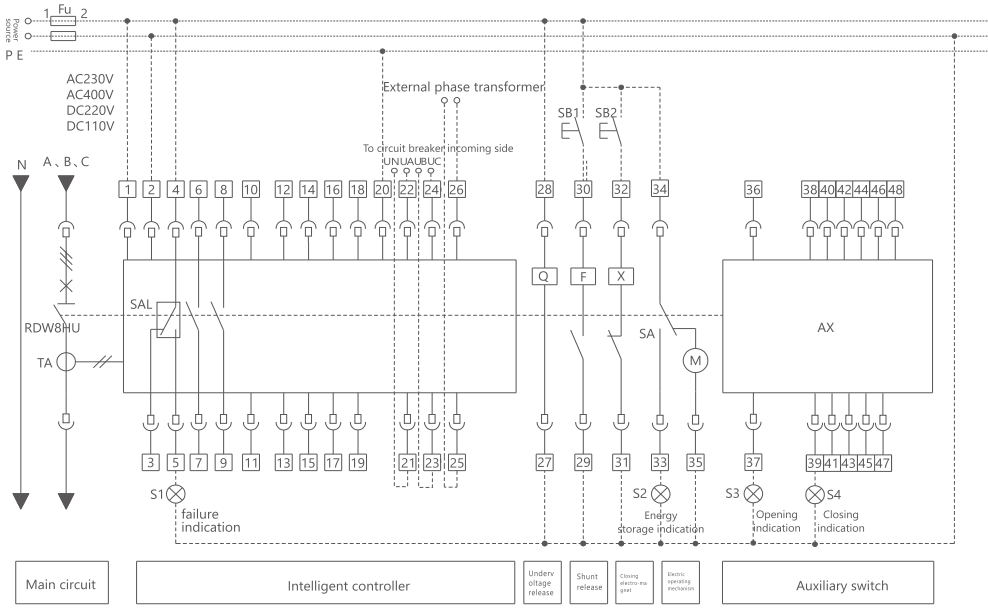
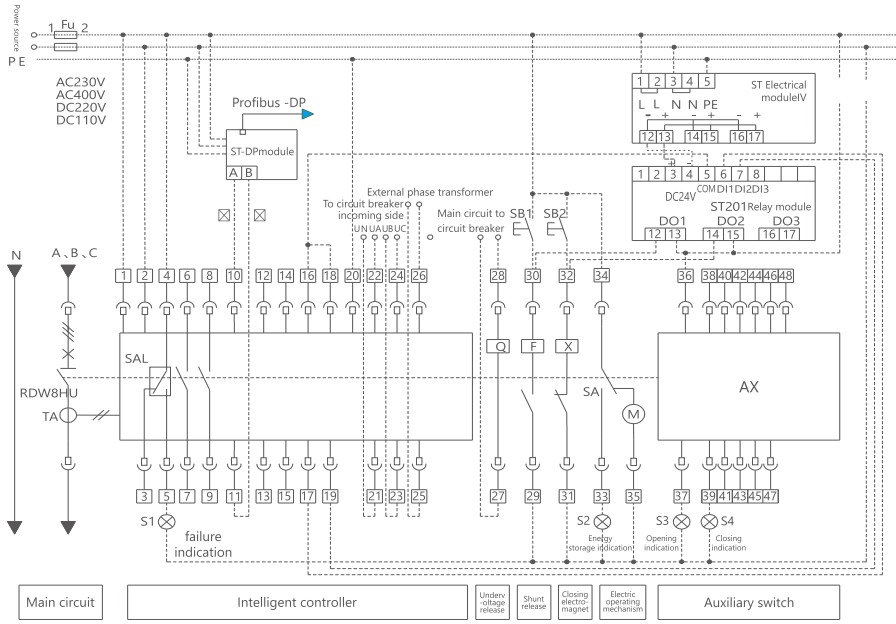
RDW8HU-2500/4000/6300 R-type secondary circuit wiring diagram



RDW8HU series high voltage intelligent universal circuit breaker

RDW8HU-2500/4000/6300　　H-type secondary circuit wiring diagram



Note: The dotted part is connected by the user. If the intelligent controller, undervoltage release device, shunt release device, closing electromagnet, electric operating mechanism and other voltages are different, they should be connected to different power sources respectively. The undervoltage releaser must be directly connected to the main circuit power supply, when the rated working voltage of the main circuit is AC800V~AC1140V, the control circuit and auxiliary circuit need to be isolated from the main circuit with a transformer, and the maximum working voltage of the control circuit and auxiliary circuit is AC400V.

Accessories

Remote operation

RDW8-2500~6300
Closing electromagnet

☐ Closing electromagnet

Operating voltageUs	AC230V	AC400V	DC220V	DC110V
Operating voltage range	(85~110)%Us			
Starting current	1.3A	0.7A	1.3A	2.5A
Suction time	≤60ms			

Note: When the circuit breaker completes the storage operation and is in the normal opening state, the circuit breaker can be controlled remotely by the closing electromagnet to close the circuit breaker quickly

RDW8-2500~6300
Shunt release

☐ Shunt release

Operating voltageUs	AC230V	AC400V	DC220V	DC110V
Operating voltage range	(70~110)%Us			
Starting current	1.3A	0.7A	1.3A	2.5A
Suction time	≤30ms			

Note: When the circuit breaker is in the closing state, the shunt trip device can be remotely controlled to quickly disconnect the circuit breaker

RDW8-2500~6300
Undervoltage release

☐ Undervoltage release

Operating voltageUs	AC230V	AC400V
Operating voltage range	(35~70)%Ue	
Reliable closing voltage range	(85~110)%Ue	
Unable close voltage range	≤35%Ue	
Power dissipation	20VA	
Above RDW5-2500 tripping time	Short time 0.5s、1s、3s、5s	

Note: 1. When the undervoltage release is not powered, the circuit breaker can not be closed;
2. Within 1/2 delay trip time, when the operating voltage is restored to more than 85%Ue, the circuit breaker will continue to open;
3. In lightning-prone areas and unstable power supply voltage grids, it is recommended to use an undervoltage release device with delay to prevent the circuit breaker from being disconnected due to short-term voltage reduction

RDW8-2500~6300
Energy storage motor

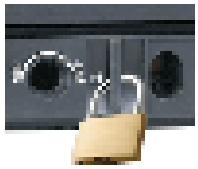
☐ Energy storage motor

Operating voltageUs	AC230V	AC400V	DC220V	DC110V
Operating voltage range	(85~110)%Us			
Energy storage time	5s			
RDW5-2500 power consumption	110VA		110W	
Above RDW5-4000	150VA		150W	

Note: 1. Realize electric circuit breaker energy storage and automatic re-energy storage operation after circuit breaker closing, so that the circuit breaker can be re-closed immediately after breaking;
2. You can also manually store energy during circuit breaker maintenance

RDW8HU series high voltage intelligent universal circuit breaker

Lock and interlo



Drawer operation padlock

☐Drawer operation padlock

1.The body of the drawer circuit breaker is pulled out of the card plate and locked with a padlock when it is in the "separate" position. After being locked, the body cannot be shaken to the "test" or "connect" position. (Padlock user

Key lock

☐Key lock

1.Key lock Locks the circuit breaker in the off position. The circuit breaker can be closed only when the lock is opened by the key and the key is not removed

2.There are three types of commonly used Key locks: one-lock key, two-lock key, and three-lock two key

Note: Two-lock and three-lock are used in two-line and one-link distribution systems

Position Door interlock

☐Position Door interlock

1..When the drawer type circuit breaker body is in the "test" or "connection" position, the cabinet door is prohibited to open, and when the circuit breaker body is in the "separate" position, the cabinet door is allowedto open。

Drawer position locking mechanis

☐ Position Door interlock

1.In the drawer type circuit breaker, the lock device of the circuit breaker"connection", "test" and "separation" position, the three positions of the circuit breaker are displayed through the indicating window, the advance and retreat handle is locked in the exact position, and the lock can be

Mechanical interlocking

☐ Mechanical interlocking

1.There are lever interlocks and cable interlocks

2.Using lever interlocking, two or three circuit breakers can only be installed vertically, using cable interlocking, circuit breakers can be installed horizontally and vertically

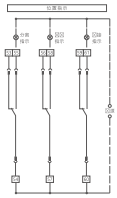
indicating contactor

RDW8-2500~6300 Auxiliary switch

☐Auxiliary contact

Rated operational voltage	AC230V	AC400V	DC220V	DC110V
Conventional thermal current	6A			
Rated control capacity	300VA		60W	

Notes：1.Default configuration: Four sets of conversion contacts 2.Other types: four normal open four normal close, six groups of conversion contacts, six normal open six normal close



Position signal device wiring diagram

☐Position signal device wiring diagram

1.Drawer type optional accessories

2.The three-position indicating contact is installed on the drawbar to indicate the position of the circuit breaker in the drawer

3.When the circuit breaker is in the connected position, see the wiring diagram on the

RDW8HU series high voltage intelligent universal circuit breaker

Protection

Door fram

☐Door fram

1.The Door frame is installed on the door where the circuit breaker is installed in the power distribution cabinet, and plays a sealing and beautiful role with up to the protection level。

Phase partitio

☐Phase partitio

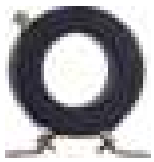
1.It is vertically installed between the bus terminals of each phase of the circuit breaker to enhance the insulation between phases of the circuit breaker

Controller accessories

N-class current transforme

☐N-class current transformer

1.In the 3P+N grounding mode, the external transformer used to measure the neutral phase current is installed on the wiring busbar by the user
2.Choose between ground transformer and leakage transformer



Ground current transformer

☐Ground current transform

1.The special external transformer used to measure the neutral phase current can protect the grounding fault of the breaker at the same time
2.The grounding mode is ground current return
3.Only applicable to R/H controllers
4.Choose one of the three external transformers and leakage transformers with N phase

Auxiliary power module

☐Auxiliary power module

1.The input voltage: AC230V/AC400V/DC110V DC220V (optional);
2.Auxiliary power module can provide power not less than 9.6W,DC24V power supply, can output four sets of wiring terminals, can provide power for intelligent controller, relay module；
3.The installation method is 35mm standard guide rail or direct installation。

Relay module

☐Relay module

1.Input voltage: DC24V
2.Contact capacity: AC250V10A; DC28V10A
3.If the switching capacity of the circuit breaker is large, the Relay module switches the circuit breaker to the relay Module.
4.The installation method is 35mm standard guide rail or direct installation

Voltage conversion module

☐Voltage conversion module

1.The voltage conversion module is designed to extend the voltage measurement range of the intelligent controller and can be used for expansion when the bus voltage is high. The module must be used together with the controller。

Note 1: If the user has other special requirements, please consult with the manufacturer before ordering;
Note 2: The optional functions and accessories of the circuit breaker are not included in the standard configuration of the circuit breaker, and the cost is calculated separately;
Note 3: The auxiliary switch of fixed circuit breaker has no six normal open and six normal

PEOPLE
ELECTRIC

RDM8DC series DC molded case circuit breaker

High-quality materials, reliable electricity

The shell is made of polyamide material with high flame retardant, high strength, corrosion resistance, high temperature resistance and safe insulation。

Applies to various scenarios

It can be used in new energy, electric power, industrial control, real estate, telecommunications,rail transit and other industries。

Better protection and selectivity

250, 315, 400, 630, 800 five shell frame to provide more selectivity, impact pressure 12kV, to meet more industry requirements。

Panel removable design

Panel modular detachable design, complete selection of electrical installation accessories to meet different needs。

RDM8DC series DC molded case circuit breaker

Product overview

RDM8DC series DC circuit breaker (hereinafter referred to as circuit breaker) is used in the Rated voltageDC250V~DC1500V, rated working current 63A~800A DC power grid circuit, this circuit breaker has overload long delay, short circuit instantaneous protection function. Used to distribute power and protect lines and power equipment from overload, short circuit and other faults。

The product standard: IEC60947-1IEC 60947-2
GB/T14048.1 "Low voltage switchgear and control equipment - Part 1: General Provisions"
GB/T14048.2 "Low voltage switchgear and control equipment - Part 2: Circuit

RDM8DC series DC molded case circuit breaker

Normal working conditions and installation

□The altitude of the installation site does not exceed 2000m;

□Allow the ambient temperature is not higher than +50℃, not lower than -5℃; (Over +50℃ capacity reduction use, specific consultation with the manufacturer)。

□Atmospheric conditions: When the ambient temperature is 50 ℃, the relative humidity of the atmosphere does not exceed 50%, and a higher relative humidity is allowed at a lower temperature, such as 90% at 20 ℃, and considering the condensation that occurs on the surface of the product due to temperature changes；

□The pollution level：level 3；

□The installation category：II;

□The magnetic field of the installation position should not exceed 5 times the geomagnetic field in any direction；

□In a medium that is not at risk of explosion, and in which there is no gas or conductive dust sufficient to corrode metal and destroy insulation；

□No erosion from wind and snow；

□an be installed in horizontal and vertical；

□There should be no significant impact and vibration at the installation place, and it should not be installed in flammable and explosive place

RDM8DC series DC molded case circuit breaker

Main circuit connection

A.Board front connection：Select the PVC copper conductor of the corresponding section specified in Table 11, strip off the insulation layer of an appropriate length, insert it into the hole of the wire hoop, compress the outer layer of the wire hoop, wrap the wire tightly, and tighten the connecting hole of the wire hoop with the wiring end of the circuit breaker using screws (see Table 12 for screw tightening torque). For a copper bar, secure the patch board to the circuit breaker and then to the copper bar。

B.Backboard connection：Fix the circuit breaker to the Backboard connection stud as shown, and then fix it with the corresponding wire。

Order instructions

The following items must be filled out clearly when ordering

□Specify circuit breaker Model number, Rated current, short-circuit protection current setting value, operating mode, wiring mode；

□Trip mode and attachment code (see Table 1): If it is not specified when ordering, the goods shall be delivered without attachment (i.e. 2300 or 3300); When ordering a circuit breaker with a shunt trip, the rated control supply voltage must be indicated; This series of circuit breaker internal accessories (shunt, auxiliary, alarm) are used lead out of the line, if you need the terminal can be customized；

□Example: Order RDM8-250, photovoltaic DC1000V, two poles, Board front connection, 200A, 100 units.

It should be written as: RDM8PV-250/2300200A, DC1000V,100 units

PEOPLE
ELECTRIC

RDM8HU series high voltage molded case circuit breaker

Better arc protection

With high performance arc extinguishing cover, using the upper and lower two layers of isolation design arc flying distance is short, can effectively prevent arc flying out caused by line damage.

Double insulation design, safer electricity

The product adopts double-layer electrical insulation design, which improves the safety of user operation.

Stable performance and more durable

With high performance arc extinguishing cover, using the upper and lower two layers of isolation design arc flying distance is short, can effectively prevent arc flying out caused by line damage.

Multiple functions to protect electricity safety

As a line to distribute electrical energy and as aline and power equipment overload, short circuit and undervoltage protec

RDM8HU series high voltage molded case circuit breaker

Product overview

RDM8HU series high voltage molded case circuit breaker (hereinafter referred to as circuit breaker). The circuit breaker is suitable for AC 50/60Hz, Rated insulation voltage 1500V, Rated operational voltage 1140V and below, rated current below 800A distribution network. It is used to distribute power and protect lines and power equipment from overload, short circuit and undervoltage failures. Circuit breakers Rated current630A and below; Can also be used to protect the motor. Under normal circumstances, the circuit breaker can be used as a line to distribute power and as overload, short circuit and undervoltage protection for the line and power equipment。

Circuit breakers for protecting motors, used in distribution networks to break off squirrel-cage motors during starting and running and to protect squirrel-cage motors against overload, short circuit and undervoltage。

Circuit breakers can be installed vertically (i.e. vertical) or horizontally (i.e. horizontal).。

Circuit breakers are suitable for isolation, symbolized as "  "。

The product standard：IEC60947-1IEC60947-2

RDM8HU series high voltage molded case circuit breaker

Normal working conditions and installation conditions

□The altitudeof the installation site does not exceed 2000m;

□Allow the ambient temperature is not higher than +40°C, not lower than -5°C; (Over +40°C capacity reduction, specific consultation with the manufacturer)。

Atmospheric conditions: When the ambient temperature is 40 ℃, the relative humidity of the atmosphere does not exceed 50%, and a higherrelative humidity is allowed at a lowertemperature, such as 90% at 20 ℃, and considering the condensation that occurs on the surface of the product due to temperature changes；

□The pollution level：level 3；

□Installation category：II;

□The magnetic field of the installation position should not exceed 5 times the geomagnetic field in any direction；

□In a medium that is not at risk of explosion, and in which there is no gas or conductive dust sufficient to corrode metal and destroy insulation；

□No erosion from wind and snow；

□Can be installed horizontally and vertically；

□There should be no significant impact and vibration at the installation place, and it should not be installed in flammable and explosive places。

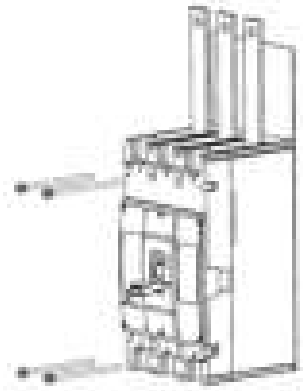
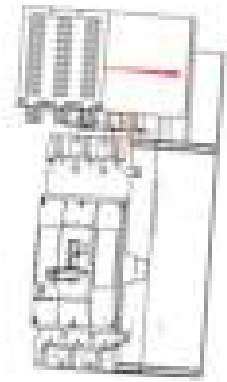
Terminal cover installation instruction



1.Use mounting screws to secure the product to the cabinet



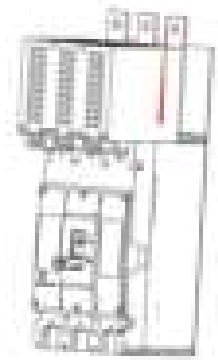


Figure 2

2. After the assembled flarc cover is flush with the red marked surface on the middle cover, slide the flarc cover to the product side according to Figure 2, so that the flarc cover and the base are clamped

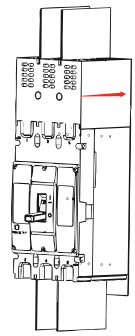

Figure 3

3. After the arcing cover is clamped between the base and the middle cover according to Figure 2, apply force in the direction marked in red according to Figure 3 to move the arcing cover. After installation, proceed as shown in Figure 3

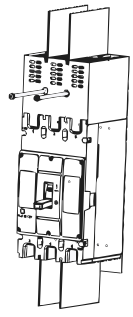

Figure 4

4.Finally, use screws to fix the arc baffle on the arc hood, as shown in Figure4

RDM8HU series high voltage molded case circuit breaker

Main circuit connection

A.Wiring before the board: Select the PVC copper wire of the corresponding section specified in Table 11, strip the insulation layer of an appropriate length, insert it into the hole of the wire hoop, compress the outer layer of the wire hoop, wrap the wire tightly, and then tighten the connecting hole of the wire hoop with the wiring end of the circuit breaker with screws (see Table 12 for screw tightening torque); For a copper bar, secure the patch board to the circuit breaker and then to the copper bar.
B.Wiring at the back of the board: Fix the circuit breaker with the wiring stud at the back of the board according to the figure, and then fix it with the corresponding wire.

Order instructions

The following items must be filled out clearly when ordering
□Specify circuit breaker model, rated current, short-circuit protection current setting value, operation mode, wiring mode；
□Trip method and attachment code (Table 1): If it is not indicated when ordering, it shall be supplied without attachment (i.e. 3300);
When ordering a circuit breaker with a shunt trip, the rated control supply voltage must be indicated；
□This series of circuit breaker internal accessories (shunt, auxiliary, alarm) are used lead out of the line, if you need the terminal can be customized；
□Example: Order RDM8HU-250M, three poles, front board wiring, 200A, quantity 100 units。
It should be written as: RDM8HU-250M/3300200A 100 unitsnt connection, 200A, 100 units.
It should be written as: RDM8PV-250/2300200A, DC1000V,100 units

RDB8DC-63 Series DC miniature circuit breaker

Adapt to more application scenarios

Suitable for photovoltaic, new energy, industry, communication and infrastructure applications。

Good environmental protection and durable materials

Using thermoplastic shell, flame retardant high temperature resistance, strong impact resistance, recyclable environmental protection materials。

Responsive with multiple protections

With overload protection, short circuit protection function, sensitive performance, fast power off, protect power safety。

Safe and reliable electric protections

Integrated front cover design, beautiful and safe, prevent arc overflow, ensure safe operation。

RDB8DC-63 series DC miniature circuit breaker

Product overview

RDB8DC-63 series DC miniature circuit breaker(hereinafter referred to as circuit breaker), mainly used in the rated DC operating voltage does not exceed 1000V, rated DC current does not exceed 63A, rated short circuit breaking capacity does not exceed 10000A protection distribution line, as the line is not frequently connected, broken and converted. With overload, short circuit protection function. At the same time, it has a powerful auxiliary function module, such as auxiliary contact, contact with alarm indication.

RDB8DC series circuit breaker is a circuit breaker product with high current limiting ability and high reliability, which is specially developed for the communication industry. It is mainly used for power distribution systems such as main cabinets, power supply cabinets, distribution cabinets, and outdoor cabinets in the communications industry.

Products comply with: GB/T14048.2 standard.

Selection guide

RDB8DC-63 series DC miniature circuit breaker

Normal working conditions and installation conditions

□The upper limit of ambient air temperature shall not exceed +40°C, the lower limit shall not be lower than -5°C, and the average temperature of 24h shall not exceed +35°C;
□The elevation of the installation site should not exceed 2000m;
□The relative humidity of the atmosphere does not exceed 50% when the ambient air temperature is +40°C, and a higher relative humidity is allowed at a lower temperature. For example, 90% at +20°C. Special measures should be taken for condensation that occasionally occurs on the product due to temperature changes;
□When wiring, the correct pole of the power supply must be connected to the positive pole of the circuit breaker, and the negative extreme must be connected to the negative pole of the circuit breaker. Reverse connection is not allowed;
□Pollution level: Level 2;
□Installation conditions: Installed in a place without significant impact, vibration, and in a medium without danger (explosion);
□Installation method: Using TH35-7.5 mounting rail;
□Installationcategory:ClassII,ClassIII。

Product classification

□According to the number of poles:1P,2P,3P,4P;
□According to the instantaneous tripping current form:Type C (8In±20%),Type D(12In±20%);
□According to the rated current:6A、10A、16A、20A、25A、32A、40A、50A 和63A;
□According to the rated operating voltage:125V/250V DC(1P),250V/500V DC(2P),300V/750V DC(3P),500V/1000V DC(4P).

Main technical data

Overcurrent trip characteristics: When the circuit breaker is installed under normal conditions and the ambient temperature (30-35 ℃), the overcurrent trip characteristics comply with the provisions of Table 1。
The rated short-circuit breaking capacity of the circuit breaker is shown in Table 2

Table 1

Trip type	Test current In	Appointed time	Expected result	Initial state	Annotation
Type C	8In×80%	t≤0.2s	Non-trip	Cold State	Close the auxiliary switch and turn on the power
	8In×120%	t < 0.2s	trip

RDB8DC-63 series miniature circuit breaker

Mechanical electrical life：

Circuit breaker under the specified rated voltage, switch on and break the rated current, power factor is 0.85~0.9, operating cyde120 times per hour (>32A) or 240 times (≤32A) frequency test, its mechanical and electrical life is 10000 times, electrical life DC 1500 times.

Structure and working principle：

The circuit breaker consists of contact system, arc extinguishing system, electromagnetic system, tripping mechanism, operating mechanism and housing。
The working principle of the circuit breaker. under normal working conditions, pull the operating mechanism, at this time the release mechanism is locked, and the dynamic and static contacts contact to make the power connected. When the line is overloaded, the bimetal sheet of the electromagnetic system produces deformation, pushes the lock to release the mechanism, and moves the contact to disconnect and cutoff the power supply. When the circuit is short-circuited,the electromagnetic system draws the iron core, and the iron core top rod pushes the lock to make the mechanism release, completing the breaking protection function of the circuit breaker。

Outline dimensions and installation dimension

Outline dimensions and installation dimensions of the circuit breaker are shown in Figure1。

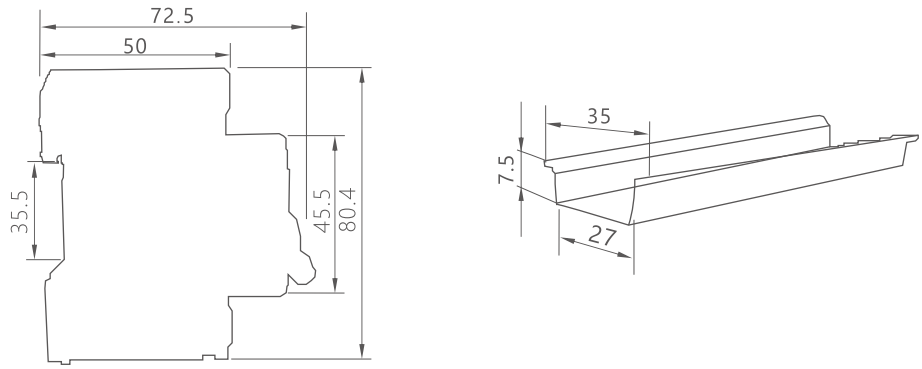

Figure1

Size	1P	2P	3P	4P

2、+:Circuit breaker positive,-:Circuit breaker negative

3、⊣+⊢ four-load；

4、DC power supply usually: L- earthing, positive and negative power supply system polarity M earthing.

Installation and adjustment

Note the following before installing the circuit breaker：

a) Check the circuit breaker to ensure that it is intact and flexible。

b) Check whether the label content of the circuit breaker is consistent with the actual use conditions。

When installing the circuit breaker, pay attention to the sign of the wiring end。

The setting current cannot be adjusted by itself and no maintenance is required。

The circuit breaker is installed using the mounting rail as shown in Figure 3。

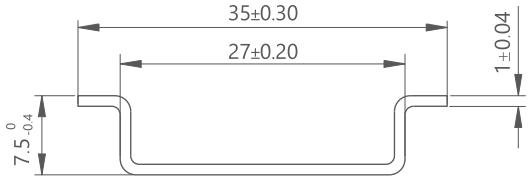

Figure 3 Dimensions of mounting rail

Order instruction

When ordering circuit breakers, the following points should be specified: 1) Product model and specification; 2) The number of poles of the circuit breaker; 3) Rated current; 4) Release type; 5) Order quantity

Example: Set RDB8DC-63 miniature circuit breaker rated current is 32A,1P,C type, 1000 sets。

It should be written as small circuit breaker RDB8DC-63 C321P,1000 sets。

PEOPLE
ELECTRIC

RDU8DC series surge protective device

Stable performance and sensitive response

It can be used in complex environments with high altitude and largeclimate change, with large flow capacity, low limiting voltage and fast response time。

More convenient to view the working status

With working status in dicator, real-time check the status change of the surge protector, easy maintenance。

Double insulation design, safer electricity

The product adopts double-layer electrical insulation design, which improves the safety of user operation.

Safe and reliable lightning protection

The nonlinear characteristics of excellent varistor performance, outstanding performance, lightning protection directly can be installed communication points.

RDU8DC series surge protective device

Product overview

The RDU8DC series surge protector (SPD) is used to protect the power surge caused by lightning or other instantaneous overvoltage, and r eleases the surge current on the power line to the ground to limit the overvoltage. Suitable for industrial, construction, civil aviation, finance, telecommunications, ports, wind power and other systems of power protection, lightning and operating overvoltage to suppress its instantaneous overvoltage sub-value, discharge surge energy, protect the safety of system circuits and equipment.

Selection guide

RDU8DC	B	20kA	2	DC500V
Product code	Protection class	Maximum discharge current	Number of poles	Maximum continuous operating voltage
Direct current surge device	B:Secondary protection	20kA 40kA	2P 3P	Front wiring (no code) Backboard connection

Normal working conditions and installation conditions

□Operating ambient temperature：-40℃~+70℃;

□Storage temperature：-40℃~+70℃;

□Altitude：Installation point elevation ≤2000m;

□The relative humidity of the atmosphere does not exceed 50% when the ambient air temperature is +40 ℃, and higher relative humidity can beallowed at lower temperatures, such as 90% at 20 ℃. Special measures should be taken for occasional condensation due to temperature changes;

□Pollution level：Level 2;

□Level of protection：IP20;

□Installation direction：

①Vertical installation,installation surface and vertical planein clination≤±5°;

②Horizontal installation。

PEOPLE
ELECTRIC

RDC8 Series AC contactors

Perfect fit, no fear of heat

50K main loop temperature rise, extended service life. 60°C high temperature environment test, not afraid of high temperature challenges. New platform, smaller size, save cabinet space.

Electronic design, guard security

Threshold voltage, accurate control of suction release voltage. Wide voltage suction, three-speed suction circumference.Built-in anti-surge function to protect equipment from damage。

Lower power dissipation, Assist " dual carbon"

With working status in dicator, real-time check the status change of the surge protector, easy maintenance。

Skilled in process, contact optimization

The contact bridge is integrated and the conductor resistivity is reduced by 12%. Contact face pressure striping and atomization process increase electrical contact reliability. Optimized silver point material, more durable and safer。

RDC8 series AC contactors

Product overview

RDC8-150~700 AC contactor (hereinafter referred to as contactor), mainly used in AC-1 use category, AC 50Hz (or 60Hz), rated working voltage to1140V, rated working current to 700A under the AC circuit, control resistance, non-inductive, micro inductive apparatus, d istribution circuit. Mainly used in charging pile. Products comply with: GB/T14048.4 IEC60947-4-1 standard。

Selection guide

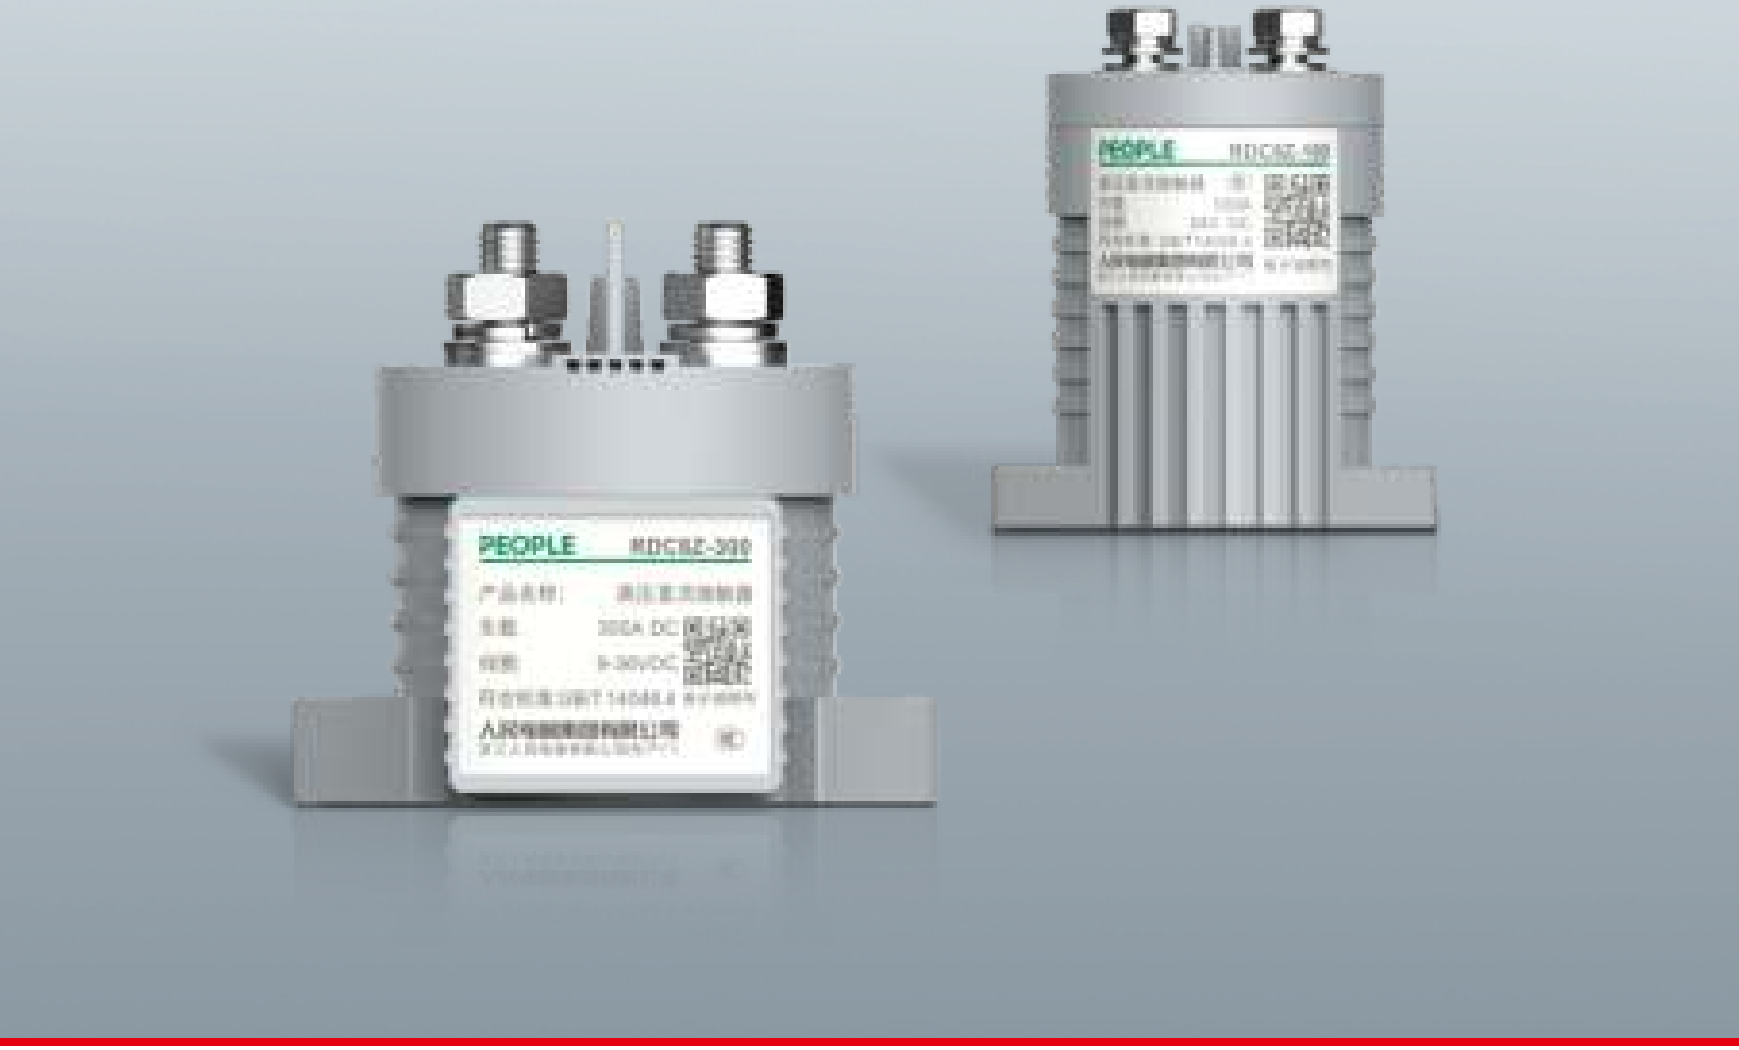
ELECTRIC



RDC8Z Series high voltage DC contactors

Excellent long service life

Threshold voltage, accurate control of suction release voltage. Wide voltage suction, three-speed suction circumference.Built-in anti-surge function to protect equipment from damage。

Excellent performance and ease of handling

The product contact seal meets the requirements of IP67, small size, more space saving, large transmission power, more environmentally friendly。

Applied to a variety of scenarios

It is mainly used for electric vehicle charging piles, automotive battery distribution systems, solar power generation equipment and other new energy-related infrastructure。

Complete specifications, more choices

Current specifications cover 50A to 300A, allowing customers to have more choices。

RDC8Z series high voltage DC contactor

Product overview

RDC8Z series high voltage direct current contactor (referred to as contactor), mainly used in the rated load voltage does not exceed 1000V, load current does not exceed the rated current of the direct current circuit environment for on-off use. The products are suitable for new energy vehicles, construction machinery, electric vehicles, charging piles, charging stations, communication power equipment, energy storage system, photovoltaic system, uninterruptible power supply and other systems。

Selection guide

RDC8Z	50	1000V
Product	Rated current	Control loop voltage
High voltage DC contactor	50、100、150、200、250、300	DC 1000V

Normal working conditions and installation conditions

□Temperature: -40°C~85°C
□Humidity: 5%~85% RH
□Installation direction: It can be installed at anyAngle according to the customer's installation environment
□Environmental pollution Class (III): The product can be used in an environment where there is conductive pollution, or where dry electrical pollution becomes conductive due to expected condensation
□Vibration impact environment: vibration 5g, impact 10g
□altitude：Below 2000 m

Technical parameters

□Themainloadcontact parametersareshown inTable1.
□AuxiliarycontactparametersareshowninTable2.
□Suction voltage: 9-36V Suction time: ≤30ms
□Release voltage: 5-7V Release time: ≤10ms
□Voltage resistance: 12KVDC between main contacts 1min Between the main contact and the coil 3500VDC 1min
□Insulation resistance：50MΩ

RDT8-PV Series fuse

More practical

Threshold voltage, accurate control of suction release voltage. Wide voltage suction, three-speed suction circumference.Built-in anti-surge function to protect equipment from damage。

More professional

Products through3C certification, strong current limiting ability, even if the working condition is complex, can also break 20kA fault current。

More reliable

It can be used in DC 1000V and 1500V optical storage systems。

More secure

Material high heat resistance, excellent electrical properties, VO flame retardant grade, with excellent high and low temperature resistance, acid and salt resistance, melt selection of silver material, stable characteristics and low power consumption。

RDT8-PV series fuse

Product overview

Fuse structure: composed of isolator and Fuse link. The moving contact consists of a Fuse carrier with a Fuse link. Fuse link structure: Made of pure silver melt, high-quality quartz sand, high-strength fuse and cylindrical cap contacts. Usage: gPV- with a full range of DC breaking capability, used for photovoltaic power generation and energy storage system DC side overcurrent protection.
Compliant with standards: GB/T14048.3, GB/T13539.1, GB/T13539.6。

Selection guide

RDT8	32	PV	30
Product code	Specification	Only for PV	Rated current of the fuse link
Packed closed tube type fuse	32 63	Dedicated to solar photovoltaic system	32(10×38):2,3,4,5,6,8,10,12,15,20,25,30 63(10×85):2,3,4,5,6,8,10,12,15,20,25,30

Normal working conditions and installation conditions

☐The ambient temperature does not exceed 40 ℃, the average measured in 24h does not exceed 35 ℃, and the average measured in a year is lower than the lowest value of the ambient air temperature of -5 ℃. The air is clean and its relative humidity does not exceed 50% at a maximum temperature of 40 ℃. You can have higher relative humidity at lower temperatures. For example, at 20 ℃, the relative humidity can reach 90%. Due to the temperature change occurring on the product body condensation situation must be taken measures。

☐The fuse should be installed in a place where there is no significant shaking or shock vibration。

☐Pollution level: Level 3。

☐Installationcategory:ClassIII。

☐The card is mounted on the TH35-7.5 standard guide rail and installed vertically。

☐Current correction factor

Altitude	≤2000m	(2000～3000)m	≥3000m
Current correction factor	1	0.9	0.8

Order instructions

Please indicate the name, model, rated current and quantity of fuse when purchasing。

☐Isolator and fuse breakers must be purchased separately。

☐When purchasing the fuse, please indicate the current of the fuse。

For example, Isolator RDT8-63PV 1000 pieces. Fuse RDT8-63PV/30A 1000 pieces。

ELECTRIC

RDG8 series isolation switch

High quality materials for safe electricity use
High quality flame-retardant shell, high strength, high temperature resistance, corrosion resistance。

Small and exquisite frame for easy installation
Smallsize, largecurrent, save moreinstallationspace。

Simple operation and high efficiency
Handle operation, smooth opening and closing, no need to open the cover can be connected。

Applied to a variety of scenarios
It can beusedin photovoltaic andgrid box,industrial distribution,residential, shoppingmalls and other scenes。

RDG8 series isolation switch

Product overview

RDG8 isolation switch (hereinafter referred to as the isolation switch), its rated operating frequency is 50Hz, rated operating voltage AC 400V, rated current to125A, in the distribution equipment of industrial enterprises, used to switch on and break the rated current of the AC circuit or as an isolation switch.
The product meets the standard: GB/T14048.3.

Selection guide

RDG8	63	2
Product code	Conventional heating current(A)	Number of poles
Disconnecting switch	63 125	2 4

Normal working conditions and installation conditions

□Ambient air temperature：-5℃~+40℃, and the average value within 24 hours does not exceed +35℃;

□The altitude of the installation site：No more than 2000m;

□Atmospheric condition：The relative humidity of the atmosphere does not exceed 50% when the Ambient air temperature is +40℃, and the relative humidity can be higher at lower temperatures. For example, at 20℃, the relative humidity is 90%, and considering the condensation that occurs on the surface of the product due to temperature changes, special measures should be taken to eliminate it;

□Levelofpollution：3class;

□Installationcategory：III、IVCategory;

□Installation condition：It should be installed vertically in a place where there is no significant shaking, shock vibration and rain and snow attack, and the installation siteshould be free from explosive dangerous media, and there is no gas and dust in the media that can corrode metal and destroy insulation。

RDPV 8-H series PV bus box

Product specifications are comprehensive

6,8,10,12,16 loop can be customized.

Adapt to bad conditions

The protection level is above IP 54, waterproof, dustproof, outdoor for a long time make use of.

More reliable

Internal main components, using the people's new collar series of new energy Product, safe and reliable.

Intelligent remote control

The data acquisition module can be customized to facilitate users to grasp the entire power station in real time Make a state.

RDPV8-H series PV bus box

Product overview

Photovoltaic bus box is an important part of photovoltaic power station, which reduces the number of upstream and downstream connection lines by connecting multiple circuits with the same power level in parallel to the photovoltaic bus box. In addition to the basic functions of the eople's electrical appliances photovoltaic junction box, such as the junction function and lightning protection function, it can also customize the advanced functions of current and voltage monitoring, failure alarm, data acquisition, wireless data transmission and temperature and humidity detection, and can realize the interconnection with the photovoltaic power station operation and maintenance center.
